Proper Inflation Guide:

• Too little helium inside balloon reduces floating time substantially.

• Too much helium may build too much pressure, causing the valve to pop out, especially outside or in other areas where air is constantly moving.

• Proper inflation provides maximum floating time, balloon life and valve efficiency.

Inflate until 1/2" of neck is filled

WARNING:

CHOKING HAZARD - Children under 8yrs can choke or suffocate on uninflated or broken balloons. Keep uninflated balloons from children. Discard broken balloons at once. Adult supervision required.
